PROFILE

Results-driven SaaS Software Engineer with nearly 4 years of experience architecting scalable, multi-tenant web applications. Expert in Java (Spring Boot), Python, and modern frontend frameworks like Angular and React. Proven track record of optimizing SaaS system performance by 30% and automating high-volume data exchange through complex GDS and H2H API integrations. Passionate about bridging backend engineering with machine learning to build the next generation of high-performance, low-latency AI orchestration tools.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Codegen International (Pvt) Ltd

May 2025 - September 2025

- Architected and led the end-to-end H2H (Host-to-Host) full-stack API integration with HotelBeds, automating high-volume data exchange and enhancing real-time booking synchronization.
- Optimized backend data processing using Java and Spring Boot, resulting in improved system stability and 100% successful production rollouts for large-scale client go-live phases.
- Engineered complex data models using Oracle DB to ensure data integrity and efficient retrieval across distributed microservices architectures.
- Managed containerized environments via Docker and Kubernetes to ensure high availability and scalability for data-driven features in high-concurrency environments.
- **Technologies:** Java, Angular, Spring Boot, Docker, Oracle DB

Software Engineer, Codegen International (Pvt) Ltd

March 2023 - May 2025

- Modernized the "Travelbooker" SaaS platform by integrating Travelport GDS and payment gateways, accelerating travel operations through streamlined system connectivity.
- Developed an auto-ticketing feature for Amadeus flight bookings, reducing manual processing time by completing a complex integration within a 10-day sprint.
- Implemented CI/CD pipelines and utilized ORM frameworks to standardize development workflows and ensure consistent delivery of Spring Boot and Angular features.
- **Technologies:** Java, Spring Boot, Angular, Docker, Kubernetes, Oracle DB, CI/CD,ORM

Trainee Software Engineer,Scienter Technologies (Pvt) Ltd

January 2022 - June 2022

- Accelerated mobile application delivery for high-profile clients like Pizza Hut and Taco Bell (Sri Lanka), contributing to the full-cycle development of cross-platform features using React Native.
- Enhanced user navigation by integrating Google Maps and Redux state management, improving the performance and reliability of the LuckeWallet app.
- **Technologies:** React Native, Redux, Google Maps.

Technical Skills

• Languages:

Java , Python , JavaScript , TypeScript

• Backend:

Spring Boot , Node.js , Django , REST & SOAP APIs

• Frontend:

Angular , React.js , React Native , Redux , HTML/CSS

• Data Science & ML:

TensorFlow , PyTorch , Scikit-Learn , NLTK , PySpark

• Databases:

Oracle DB , PostgreSQL , MySQL , MongoDB , Firebase

• Cloud & DevOps:

AWS , Docker , Kubernetes , CI/CD , Git

• Methodologies:

Agile (Scrum) , Unit Testing , ORM , Software Architecture

PROJECTS

Intelligent Candidate Ranking System

- Designed an end-to-end ML pipeline to rank candidates by performing automated feature extraction from resumes and LinkedIn profiles.
- Implemented Natural Language Processing (NLP) techniques using Python and NLTK to preprocess unstructured text data for high-accuracy analysis
- Developed and tuned predictive models using Scikit-learn to categorize and rank talent based on multi-dimensional data points.
- Architected a hybrid data storage solution utilizing MySQL for structured metadata and MongoDB for flexible, high-volume document storage.
- Utilized Django to build a robust web interface, allowing for seamless interaction with the underlying machine learning models.
- **Technologies: Python, NLTK, Django, Scikit-learn, MySQL, MongoDB.**

Leave Approval & Inventory Management System

- Designed a robust RBAC (Role-Based Access Control) system to manage hierarchical approval workflows, ensuring data security and organizational compliance.
- Developed automated email and system notifications using Spring Boot to streamline communication between departments and reduce manual processing delays.
- **Technologies: React.js, Spring Boot, MySQL.**

Kandyan Energy Website & Admin Panel

- Designed a platform for solar panel inquiries and power plan generation, and on time, the client delivered a rate of 100%.
- **Technologies: ReactJS, NodeJS, MongoDB.**

EDUCATION

MSc Data Science University of Hertfordshire, UK	September 2025 – July 2026 (Expected)
Current Grade: First Class	
Major: Machine Learning, Neural Networks, Applied Data Science	Minor: Data Mining

BSc. in Information Technology (Hons) University of Moratuwa, Sri Lanka	November 2018 - July 2023
Grade: Second Class UpperDivision	
Major: Software Systems & Information Technology	Minor: Machine Learning & Artificial Intelligence

ACHIEVEMENTS

- Microsoft Cloud Skills Challenge Winner (2021): IEEE student branch-Sri Lanka
- Merit Team at Home Alone Hackathon (2020)
- Spirit of Service Award by Rotaract Club (2019-2020) : University of Moratuwa, Sri Lanka

CERTIFICATES

- AWS Fundamentals (Coursera)
- Version Control with Git (Atlassian)
- Scrum Foundation Professional Certificate (CertiProf)

SOFT SKILLS

- Strong problem-solving with focus on performance and scalability
- Effective collaboration in Agile, cross-functional teams
- Ability to quickly learn and apply new technologies
- High attention to detail and ownership of deliverables
